

AVEL D. PANALIGAN

Full-Stack Developer | React · Next.js · TypeScript · Node.js · PostgreSQL · PHP

aveldpanaligan@gmail.com · +63 991 029 8335 · Portfolio: [avan-cv26.vercel.app](#)

Metro Manila, Philippines (UTC+8) · Available for remote work

SUMMARY

Full-Stack Developer with 6+ years building and maintaining production web apps for fintech, e-commerce and real-time gaming: React, Next.js and TypeScript on the front end; Node.js, Express and PHP on the back end; REST and GraphQL APIs, WebSocket feeds, and GCash and PayMaya payment integrations. Recent full stack builds add PostgreSQL, Supabase, Docker and GitHub Actions CI/CD, including an offline-first PWA with 1,000 automated tests and a 3D web app in Three.js. Works in Agile sprints with code review, communicates in clear written English, and works independently with remote clients.

SKILLS

Languages: JavaScript, TypeScript, PHP, SQL, HTML/CSS, Python, C#, C++, C

Front end: React, Next.js App Router, React Native (Expo), Vue.js, Tailwind CSS, Three.js, React Three Fiber, WebSocket, PWA and service workers, responsive and mobile-first UI, accessibility (WCAG AA)

Back end & APIs: Node.js, Express.js, REST APIs, GraphQL, webhooks, OpenAPI, Zod, JWT, role-based access control, WordPress, WooCommerce, Laravel, CodeIgniter, ServiceNow

Databases: PostgreSQL, MongoDB, SQLite, Supabase, Row Level Security, Drizzle ORM, Prisma, Mongoose, Redis

Testing & DevOps: Jest, Vitest, React Testing Library, Playwright, Git, GitHub, GitHub Actions, CI/CD, Docker, Vercel, AWS S3, cPanel/WHM

Payments & integrations: Stripe Checkout, Stripe webhooks, GCash, PayMaya, Telegram Bot API, Tencent Cloud Chat, Web Push, Cloudinary

Ways of working: Agile/Scrum, code review, UAT with QA, technical documentation, Postman, Figma

EXPERIENCE

Freelance Full-Stack Developer | Self-employed | Remote

Jun 2026 - Present

Tech: PHP 8, WordPress, WooCommerce, Stripe, cPanel/WHM, Elementor

- Owned Signal One International's WooCommerce launch end to end for an Australian tactical-gear retailer: on shared cPanel hosting with no SSH, upgraded production from PHP 7 to PHP 8 and carried 293 products, 1,156 variations, about 5,100 orders and a 213MB database across without losing an order.
- Traced live Stripe webhook failures to a signing-secret mismatch and reconciled the orders paid during the outage; debugged transactional email bypassing the mail service for wp_mail.
- Ran pre-launch QA across checkout, tax and search (GST calculated without shipping, a missing Australian Terms and Conditions page, SKU prefix collisions), resolved page-cache conflicts serving stale HTML, and wrote the client's handover documentation.
- Rebuilt transformingcircle.com's devotional library into card-indexed pages on WordPress and Jetpack VideoPress.

Full-Stack Developer | Technicare Software Inc. | BGC, Taguig

Jul 2025 - May 2026

Tech: React, TypeScript, WebSocket, REST APIs, Tencent Cloud Chat, Cocos Creator

- Built and maintained real-time lotto products (Pick2Win, Grand Sabado, 3D Rush) on lotto play.ph in React and TypeScript, with REST APIs and live WebSocket feeds for betting rounds, results and chat.
- Built a chat-moderation platform from scratch (authentication, roles, Tencent Cloud Chat, mute deadlines, Excel export), adopted by operations teams across multiple game environments.
- Engineered shared, reusable component packages (Free Ticket, Bullet Comments, Newbie Guide) consumed by three lotto front ends, cutting duplicated code across products.
- Shipped 8+ versioned releases (v1.13 to v2.5) in Agile sprints with code review, fixing 100+ bugs across responsiveness, state management, animation timing and WebSocket reliability; collaborated with QA and backend teams on UAT sign-offs and wrote project documentation and bilingual game rules.

Full-Stack Developer | SNSoft Technology Inc. (formerly Softify) | BGC, Taguig

May 2024 - Jul 2025

Tech: React, TypeScript, Node.js, Express, MongoDB, GraphQL, AWS S3, ServiceNow

- Built a mobile-first, real-money gaming platform inside the GCash app; optimized state management, enforced data integrity and collaborated directly with GCash partner teams to unblock releases.
- Migrated the production codebase from Vue 2 and vanilla HTML to React; worked in React and TypeScript in Agile sprints with code review.

- Designed and shipped the Casino Plus Telegram bot on Node.js, Express and MongoDB: webhook updates, auto-login with Telegram Login Widget token verification, in-chat payments, and a real-time admin dashboard backed by REST APIs.
- Built mini programs for Lazada, Maya and GCash and an SEO-optimized static site with Puppeteer; ran AWS S3 deployments across UAT and production.
- Helped manage the in-house project system on ServiceNow through the rename to SNSoft: JavaScript Business Rules and Script Includes, service-request workflows, Service Catalog and Service Portal.

Front-End Developer | WBridges Manpower Corp. | Kawit, Cavite

Nov 2022 - Apr 2024

Tech: Next.js, React, GraphQL, Bootstrap, AWS

- Built a responsive, performance-focused casino gaming site and dynamic landing pages for user-acquisition campaigns in Next.js, on GraphQL APIs, in Agile sprints with code review.
- Developed Android and iOS app download pages in Next.js with conversion tracking; hosted and deployed on Pagoda and AWS.
- Built most of feiwin.net, the company website, on Bootstrap in English, Chinese and Filipino, and hosted it.

Jr. Backend Developer | ExpressPay Inc. | San Juan City

Jun 2021 - Nov 2022

Tech: Node.js, REST APIs, GraphQL, PayMaya, GCash, WordPress

- In Agile sprints, developed and maintained core Node.js services with REST and GraphQL APIs for the legacy system running in every ExpressPay branch nationwide.
- Integrated the PayMaya and GCash payment APIs to enable cross-channel transactions.
- Helped build and maintain the company's WordPress franchise website, launched in late 2021 and kept current through 2022 as franchise packages, partners and a WooCommerce shop were added.
- Ran monthly data archiving, system maintenance and security updates for regulatory compliance, collaborating with cross-functional teams to keep branch downtime low.

Jr. Developer (Backend Focus) | Sumague's Firm | Candelaria, Quezon

Feb 2020 - Jun 2021

- Wrote backend code in C and C++ and form-driven CRUD over a SQL database, with the pricing logic behind it; covered IT support, including hardware troubleshooting, between coding tasks.

WordPress Developer (Part-time) | Gleen Inc. | Lucena, Quezon

Apr 2019 - Feb 2020

- Optimized WordPress sites for speed and SEO, built custom shortcodes and plugins, and set up workstations for new hires.

PROJECTS

Habibit: Offline-first habit tracker (PWA)

Personal project · 2026

Live: habibit.vercel.app · Tech: Next.js 16, React 19, TypeScript, Supabase (PostgreSQL), Edge Functions, pg_cron, Web Push, Vitest, Playwright, Docker, GitHub Actions, Vercel

- Designed an offline-first sync architecture (an outbox cleared only on server confirmation, latest-change-wins merging per record, tombstone deletes, a first-sign-in merge that never overwrites local data) and secured multi-user data with PostgreSQL Row Level Security across 11 SQL migrations.
- Built scheduled push reminders: pg_cron calls a Supabase Edge Function (Deno) every 15 minutes to send VAPID-signed Web Push notifications, handled by a service worker that also opens the app offline.
- Built a 1,000-test automated suite that runs in GitHub Actions CI on every push and pull request and is green on master: 622 unit, 9 daylight-saving, 107 database security tests against Supabase in Docker, and 262 Playwright browser tests on Android and desktop profiles.
- Enforced WCAG AA contrast on every colour pair in light and dark themes with automated tests, plus 44px touch targets and no horizontal scroll at 375px.

AMYGO: Walkable 3D gym and workout log in the browser

Personal project · 2026

Live: amygo.vercel.app · Tech: React 19, TypeScript, Three.js, React Three Fiber, Vite, Vitest, PWA, Vercel

- Built a 3D gym web app in React Three Fiber with 17 animated exercises on 11 machine types and a build-mode editor for dragging, snapping and rotating 28 pieces of equipment, installable and offline as a PWA.
- Wrote two-bone inverse kinematics that drives a rigged glTF character so hands and feet track moving handles, pedals and bars every frame, held to 3 cm tolerances by Vitest (142 tests).
- Cut per-frame draw calls 57% (1,253 to 533) by merging static meshes per material, and the pre-paint download from about 470 KB to 80 KB gzipped by code-splitting Three.js, enforced by a draw-call budget test and a deploy-blocking bundle budget.

EDUCATION

Bachelor of Science in Computer Science | Manuel S. Enverga University | Candelaria, Quezon

2019 - 2021

Technical Vocational ICT | AMA Computer Learning Center | San Pablo City, Laguna

2017 - 2019
